1.

```java
public class Hello {
    public static void main() {
        System.out.println("Doesn 't execute");
    }
}
```

2. The same thing happens when you remove each of the four words.

```
error: Class names, 'HelloWorld', are only accepted if annotation processing is
                                    explicitly requested
```

3.

- `public`. `error: <identifier> expected`
- `static`. `error: <identifier> expected`
- `void`. `error: cannot find symbol`
- `main`. Class thiếu `main method` (do đó không chạy được).

5.

```java
public class HiThree {
    public static main(String[] args) {
        System.out.println("Hi, " + args[2] + ", " + args[1] + ", and " + args[0] + "!");
    }
}
```

6.

```java
import java.io.File;
import java.io.FileNotFoundException;
import java.util.Scanner;

public class Initials {
    public static void main(String[] args) {
        try {
            File    myObj    = new File("./asci.txt");
            Scanner myReader = new Scanner(myObj);
            while (myReader.hasNextLine()) {
                String data = myReader.nextLine();
                System.out.println(data);
            }
            myReader.close();
        } catch (FileNotFoundException e) {
            System.out.println("An error occurred: File not found.");
            e.printStackTrace();
        }
    }
}
```

7. Trong Java, tất cả mọi application đều có hàm `main` mà bắt buộc signature là

```java
public static void main(String[] args)
```

```
❯ java Hello
Error: Main method not found in class Hello, please define the main method as:
   public static void main(String[] args)
or a JavaFX application class must extend javafx.application.Application
```
